Synopsis book

In the compelling popular science tradition of *Sapiens* and *Guns, Germs, and Steel*, a groundbreaking and eye-opening exploration that applies evolutionary science to provide a new perspective on human psychology, revealing how major challenges from our past have shaped some of the most fundamental aspects of our being. The most fundamental aspects of our lives from leadership and innovation to aggression and happiness were permanently altered by the "social leap" our ancestors made from the rainforest to the savannah. Their struggle to survive on the open grasslands required a shift from individualism to a new form of collectivism, which forever altered the way our mind works. It changed the way we fight and our proclivity to make peace, it changed the way we lead and the way we follow, it made us innovative but not inventive, it created a new kind of social intelligence, and it led to new sources of life satisfaction. In *The Social Leap*, William von Hippel lays out this revolutionary

The most fundamental aspects of our lives?from leadership and innovation to aggression and happiness?were permanently altered by the "social leap" our ancestors made from the rainforest to the savannah. Their struggle to survive on the open grasslands required a shift from individualism to a new form of collectivism, which forever altered the way our mind works. It changed the way we fight and our proclivity to make peace, it changed the way we lead and the way we follow, it made us innovative but not inventive, it created a new kind of social intelligence, and it led to new sources of life satisfaction. In *The Social Leap*, William von Hippel lays out this revolutionary
